

Cobb sizing tester

It consists of a cylinder of known inside diameter and length. It has a metallic plate, which is used for clamping the one side of the cylinder with the help of bracket and bolts.

The metallic plate, which is used for clamping purpose, is paste a rubber sheet for the perfect clamping. The whole assembly of the cylinder and clamping arrangement is pivoted so that easy and fast pour off the water takes place. A Stainless Steel 10 Kg roller of specified size and shape is also provided with the instrument.

The equipment is designed to give a long and trouble free life. The test is used for determining liquid absorptive or resilience of treated and untreated papers, boards, fabrics and other sheet materials..
